

Did you know ...

... around 70% of wheelie bin waste can be diverted from landfill?

Biffa Leicester is unique in the fact that up to 70% of wheelie bin waste can be extracted and diverted from landfill.

METALS

All metals are extracted, recycled and turned into new products

ORGANIC WASTE

(i.e. kitchen scraps) is made into a soil conditioner used on reclaimed land

LIGHTER MATERIALS

(i.e. paper, card, plastics) are baled as FLOC - an alternative to fossil fuel in the cement making industry

How does the Ball Mill work?

The Ball Mill is a large drum containing 43 tonnes of steel balls, which rotates like a big washing machine.

The steel balls pummel and grind down the waste into smaller pieces, making it easier to extract the different materials through various processes, diverting them from landfill.
